

Technology Transition Initiative

Accelerating delivery of mature technology to the Warfighter

Handheld Capability for Precision Fires Image Software Suite

Summary: Accelerate the core Irregular Warfare mission set capability and advance ground warfare operations by transitioning a software suite that works to provide image, video, and geographical capabilities on the Army's Pocket Sized Forward Entry Devices (PFED) and Special Operations Forces (SOF) compatible Windows CE/mobile handheld computers. Build these forward operating battlespace awareness applications around the previously transitioned and deployed Precision Fires Image (PFI) which is a National Geospatial-Intelligence Agency (NGA) validated, CENTCOM approved, image based targeting tool for coordinate seeking weapons.

Current status: project in work
